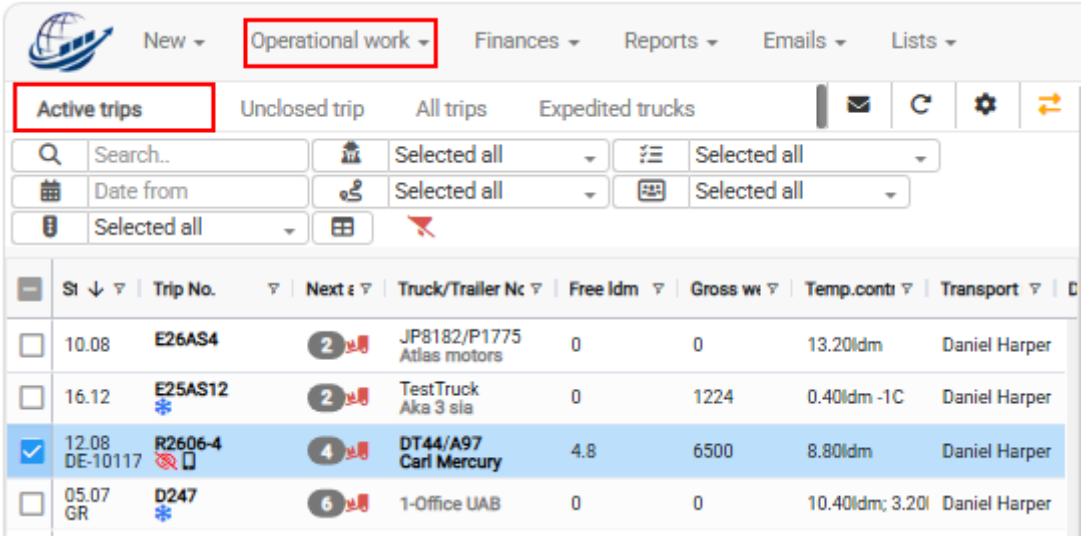
How to change the loading and delivery sequence in a trip?

Navigation path: Operational work → Trips/Speditions → Active trips

1. Open **Operational work → Trips/Speditions → Active trips**.
2. Select the required trip from the list on the left.



3. Open the **Map** tab on the right side of the trip planning view.
4. Drag and drop the loading or delivery points to change their sequence.
5. Check the updated route information in the detail panel.

The route can be shown on the map only if the loading and delivery addresses have correct GPS coordinates.

> If the route is not shown correctly, check the GPS coordinates for each loading and delivery address.
> You can ask Cloudex TMS team to set GPS coordinates as a mandatory fields

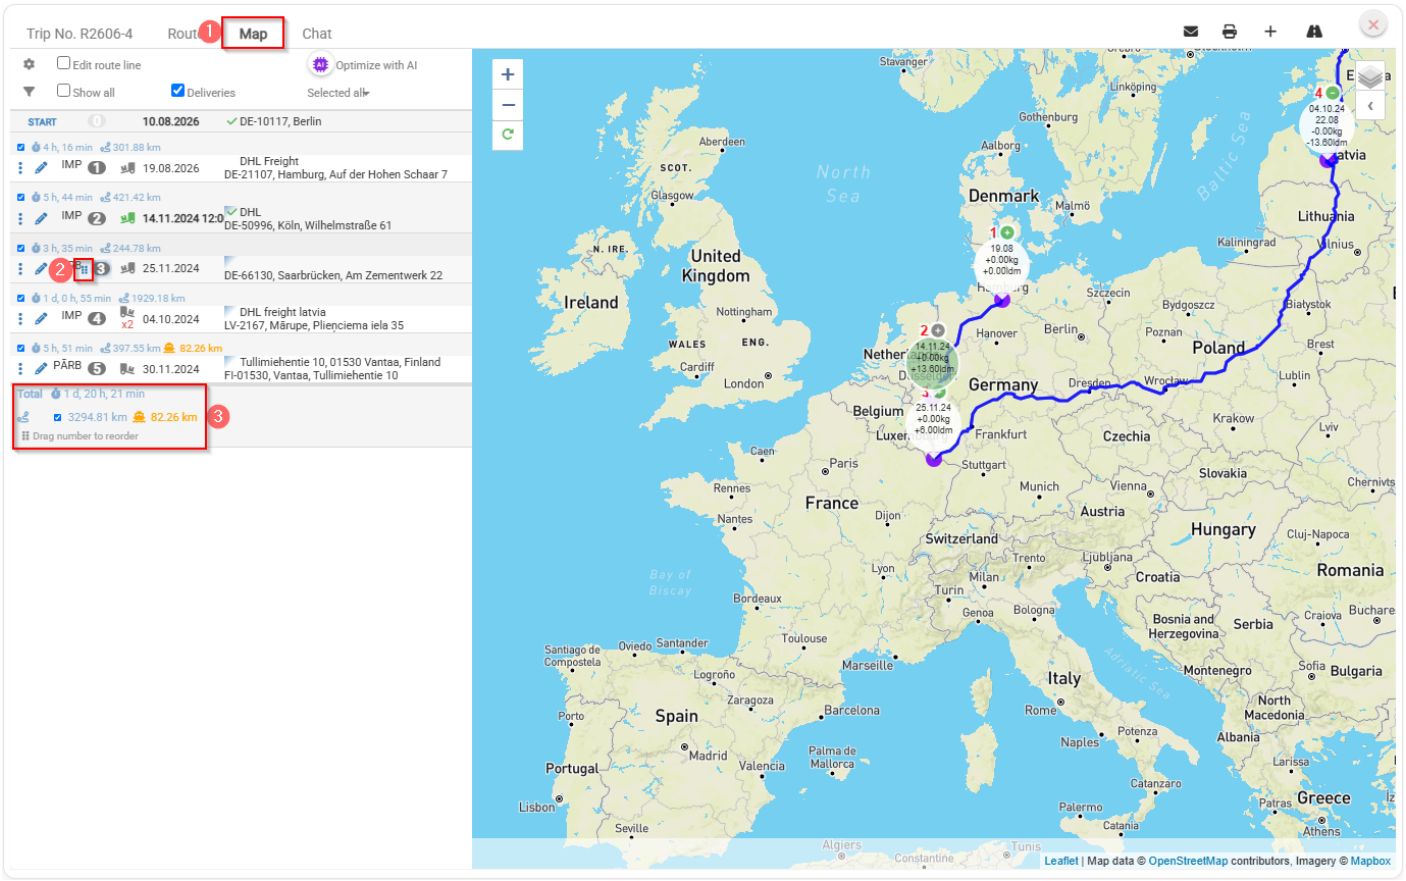
How to get easy GPS data?



What can you check in the detail panel?

The detail panel shows:

- total travel time;
- total distance in kilometres;
- additional kilometres travelled by ferry.

Key benefits

- **Easier route planning** – quickly change the stop sequence by dragging and dropping points on the map.
- **Saves time** – no need to manually rebuild or re-enter the route.
- **Better overview** – the detail panel clearly shows total travel time and distance.
- **Faster decision-making** – easily compare different stop sequences and choose the most efficient route.
- **Better ferry visibility** – see how many additional kilometers are traveled by ferry.
- **Improved user experience** – an interactive map and clear trip summary make route planning more intuitive.
